Introduction

What is LockIt?

LockIt is an easy-to-set-up and easy-to-use tool for automatically locking up your device after a pre-defined period of inactivity in seconds which prevents your device from accidental pressing of buttons.

Additionally, for your convenience you can specify applications where the “automatic lock” would not be applied so that you can use them without having to press the unlock button(s) every time the period of inactivity expires.

By locking up your device screen, LockIt saves up the battery life of your mobile device so that you can enjoy using your mobile for a longer period of time.

Requirements

Operating System

The application is compatible with all BlackBerry devices with BlackBerry OS version 4.2.1 or higher. This includes but is not limited to BlackBerry Storm, Tour, Bold, Curve, Pearl and the 88xx series.

Please note that the operating system for the different models may vary depending on operator and device release date.

A full list of devices compatible with LockIt or such that can be upgraded to OS version supported by the product is available any time at http://www.melonmobile.com/products/lock_it/trial/.

Installation

Obtain the installation file

LockIt is available for installation through your desktop PC or as an Over-the-Air installation file for direct download and installation on the BlackBerry device.

- To download the desktop installation files via the *BlackBerry Desktop Manager*, go to www.melonmobile/products/lock_it, select Download and specify your BlackBerry model.

After you download the file, extract it onto a selected location on your hard drive.

The desktop installation files are also available through a number of Melon Mobile software resellers as Handango.com and Mobihand.com.

- LockIt can also be downloaded or installed directly on your BlackBerry. Visit <http://melonmobile.mobi> to download and install Over-The-Air.

Install

Desktop Installation

To install the application from your desktop PC, follow these steps:

On your Desktop PC:

1. Start the *BlackBerry Desktop Manager* on your desktop PC.
2. The *Desktop Manager* is available for installation on the CD, included in your BlackBerry phone package. You can always download and install the latest version of *BlackBerry Desktop Manager* from <http://na.blackberry.com/eng/services/desktop/>. The software is available through the BlackBerry devices manufacturer RIM free of charge.
3. Make sure your BlackBerry device is connected to the desktop PC and select **Application Loader** and then press the <Start> button in **Add / Remove Applications** in *Desktop Manager*.
4. In **Application Loader** select <Browse> and locate the downloaded installation files for LockIt.
5. Select file **lockit_berry_desktop_v_1_00.alx**. LockIt will be added to the list of installed applications. Click <Next>.
6. Click <Finish> in the **Application Loader** screen. Desktop Manager will connect to your BlackBerry device and upload the installation files.

Over the Air Installation

To download and install LockIt directly on your device:

1. Visit <http://melonmobile.mobi> using the **Browser** application on your BlackBerry device. Navigate to LockIt and select <Download>. A progress bar will show you how the download process advances.
2. When the download is complete, the installation will be automatically initiated. You will be notified when LockIt is installed.

Depending on the BlackBerry device model LockIt will be installed in the *Applications* folder or in the *Download* folder on the BlackBerry device.

Set Application Permissions

1. When you try to activate LockIt on your BlackBerry device, the application will ask you to set “Phone” under “Permissions” to “Allow”.
2. Make sure that you select **<Save>**. This way you will ensure that the program will get activated on your phone.

Activation

This product is distributed as a:

Trial version

LockIt is offered for download as a full functional trial version limited to 20 locks. After reaching this limit, the application will request license activation.

Licensed version

Once purchased, the license activates the product and grants unlimited use of LockIt.

The license is based on the unique PIN (Personal Identification Number) of your phone.

The PIN will be requested in the process of buying a license. To retrieve your device PIN:

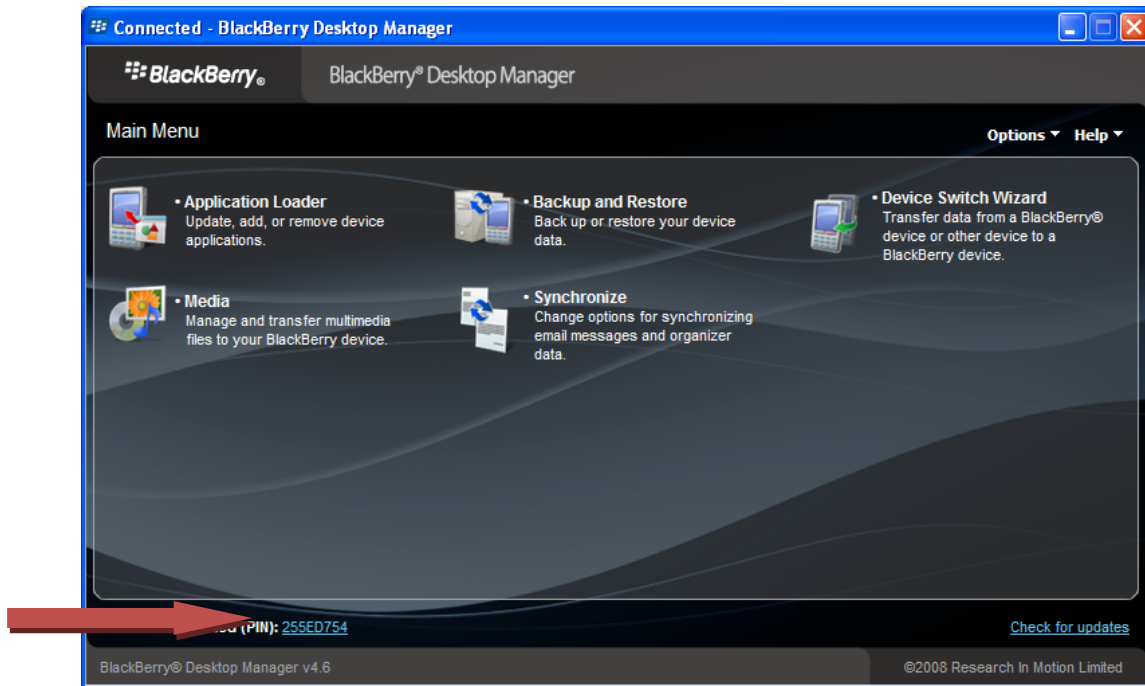

- On the BlackBerry device select **Options > Status**.

Status	
Signal:	-40 dBm
Battery:	100 %
File Free:	47623422 Bytes
PIN:	2100000A
IMEI:	123456.78.364813.8
WLAN MAC:	41:EB:9F:85:77:67
IP Address:	0.0.0.0

LockIt will also show your device PIN when you select **Activate** from the application main menu.

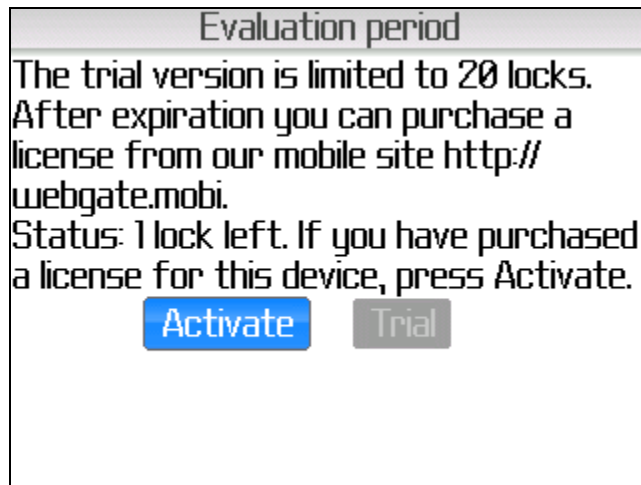

Or

- On your desktop PC, connect your BlackBerry device and start the BlackBerry Desktop Manager. The PIN is showed in the bottom left corner of the Desktop Manager main screen.

Activate LockIt

Once you have purchased a license, you can use the **Activate** option available upon LockIt start-up.

Before you activate the product, make sure you:

- Have purchased a license.
- Can go online from your phone.

Uninstall

To uninstall the application:

1. From your BlackBerry device main menu select **Options > Advanced Options**.
2. Choose **Applications** from the list that will appear on your screen.
3. Locate “LockIt” in the list of installed applications and highlight it.
4. Press the main menu button and select **Delete**.
5. The application will ask for a confirmation of the deletion. Restart the BlackBerry device in order to fully uninstall LockIt.
6. In case you have installed the application through the BlackBerry Desktop Manager, you might need to remove LockIt from there as well. Connect your device to the desktop PC and open the *BlackBerry Desktop Manager*.
7. Select **Application Loader** and then **Add / Remove Applications**.
8. Locate “LockIt” in the list of installed programs in the Desktop Application Loader, select it and press the **Remove** button.
9. Confirm the deletion and then press **Next**.
10. Click **Finish** to fully uninstall.

Enabling/disabling LockIt

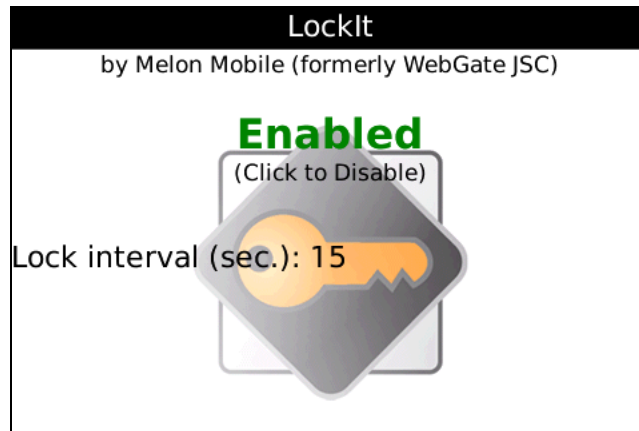

To enable or disable LockIt, simply press the menu button  and select **<Enable>** or **<Disable>**.

To change the status of LockIt, you can also:

- For touch screen devices: tap on the LockIt main screen.

- For non-touch screen devices: press the track-wheel or the track-ball.

The current status of the application can be viewed at anytime on the application main screen.

Unlocking your device

Once the lock interval you have specified under **<Preferences>** expires, your device will get locked up.

To unlock it, use the combination of buttons displayed on your device screen.

For the different devices, this combination might be different. On some devices, a single button needs to be pressed.

Preferences

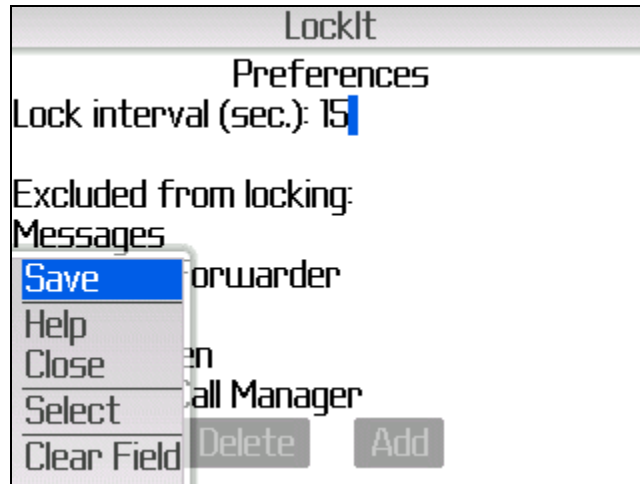

Under **<Preferences>** you can:

- Define and change the lock interval after which your device screen should automatically lock up.
- Define a list of applications on which LockIt would not be active.
- Add and remove applications from the list of applications on which LockIt would not be active.

Setting/Changing the LockIt lock interval

To set/change your LockIt lock interval:

1. Press the menu button 
2. Choose **<Preferences>**
3. Enter your preferred lock interval
4. Confirm with **<Save>**

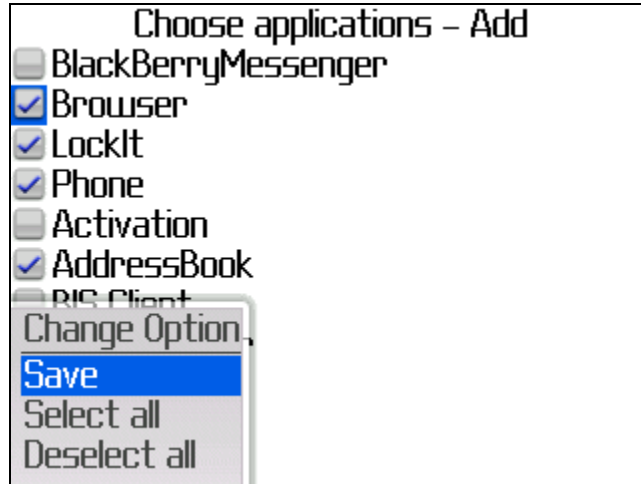

The lock interval is defined in seconds and can be between 5 and 999 seconds.

Creating/Editing your list of applications to be excluded from locking

To be able to create your special list of applications which would not get automatically locked up after the specified period of inactivity:

1. Press the menu button  and select **<Preferences>**.
2. Use the **<Add>** button to add your selected applications.
3. A list of all applications available on your device will appear on your device screen. You can mark only selected applications or all applications. To be able to mark all applications, press the menu button and choose **<Select all>**.
4. To confirm the changes made and to create your list of applications to be excluded from locking, press the menu button  and select **<Save>**.

Once you have created your list of applications on which LockIt would not be active, you can quickly and easily add and remove applications from it.

To add or remove new applications from the list of applications to be excluded for locking:

1. Press the menu button  and select **<Preferences>**
2. Press the **<Add>** or **<Delete>** button
3. Mark the applications you would like to add/remove
4. Confirm with **<Save>**

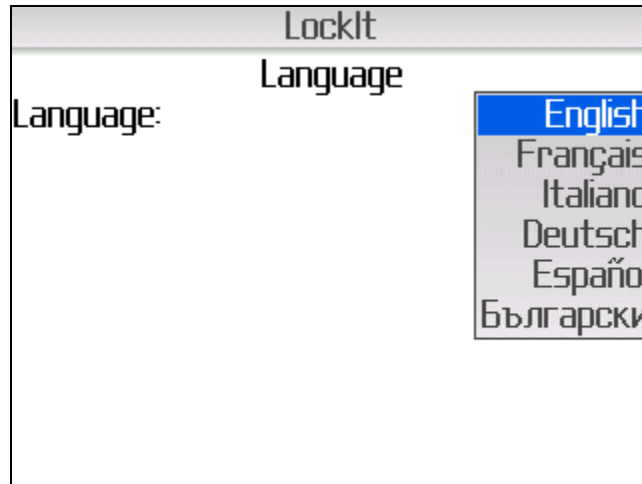

Settings and Additional Features

Changing the application language

LockIt is available in several different languages. You can choose between **English, French, German, Spanish, Italian and Bulgarian.**

To change the language settings:

1. Press the menu button  and select **Language.**

2. Select your preferred language.
3. Press the back button.
4. Select **<Save>** to confirm the change.

Additional features

Some additional features are available through the LockIt main menu. To access these features, press the

menu button  while you are on the application main screen.

- **Buy online (optional)** – allows you to access the Melon Mobile mobile store and buy a license for LockIt.
- **Activate** – select this option when you have purchased a license for LockIt in order to connect to our server and to retrieve your license file.
- **Check for update** – this option allows you to check if a new version of the software is available.
- **More applications** – this option will direct you to the Melon Mobile mobile software catalog where you can browse and download other software titles.
- **Help** – opens the LockIt help notes.
- **About** – opens an informative screen with details about the application version and producer.
- **Close** – closes LockIt

Contacts
